Research Interests

Biosphere-Atmosphere Interactions & Feedbacks, Seasonal Climate Anomalies, Drought, Carbon-Water Interactions, Climate Change, Land-Use Change, Carbon Sequestration

My research is focused on the biosphere-atmosphere exchange of carbon dioxide, water vapour and energy in terrestrial ecosystems, and the interactions with climate, land use and ecophysiology. I am specifically interested in the effects of drought and climate change on carbon exchange, and on ecosystem processes such as photosynthesis and transpiration. Further interests include the partitioning of ecosystem fluxes, carbon-water interactions, and the up-scaling of ecosystem.

In order to answer these questions, I use the eddy covariance technique, remote sensing, and modelling approaches across various climates and spatial scales. Current and past projects include ecosystem exchange studies in tropical (Sardinilla, Panama), Mediterranean (Sagehen Creek & Tonzi/Vaira Ranch, California) and temperate climates (Switzerland), as well as synthesis studies at regional (Swiss FluxNet, Australia), continental (US) and global scale (FLUXNET).

Apart from the biosphere-atmosphere exchange in terrestrial ecosystems, I have worked on the effects of land-use change on soil erosion and landscape fragmentation using modelling techniques and GIS, the detection of Mountain Pine Beetle infestations using remote sensing, and mapping expeditions to remote areas.
